### **WHAT'S NEW:**

As the months of summer roll on, we certainly have a lot of news to share with our clients. This past month has been very busy, introducing our two new associates to clients, and getting them situated with the way our clinic is run. Many of you have already had the opportunity to be introduced; however, some of you have not. We strongly encourage each of you to stop in during the week to meet Dr. Moore and Dr. Chediak, or feel free to send them a welcome email.

Now that they are getting more comfortable with their surroundings, they are each having the opportunity to branch out and find their individual interests within the clinic. Over the next few weeks, we will take the time to let you, the clients, learn more about our new vets. Keep your eyes peeled for our "Get to Know" section.

### **School Is In Session**

Beckett and Associates Puppy Pre-School has just begun a second round of classes with brand new puppies. We would like to congratulate our first graduating class of puppies and owners on a job well done. The new graduates are: "Mike" Foohey, "Diamond" Blake, "Lily" McKinney, and "Heidi" Robbins.

### **August 2006**

Puppy Pre-School lasts for seven weeks and is open for puppies from 8 to 16 weeks old. It introduces them to proper training techniques, handling, and play time. If you have a new puppy and are interested in joining a Pre-School class, please contact our office. The next available session begins September 21<sup>st</sup>.

### **Scrub A Dub Dub**

'Tis the season to treat your favorite companion to a refreshing bath or brushing. Downstairs from our clinic, we now have Beckett and Associates Grooming Salon. Give your pet a break from the heat and send them to our special spa for the day. Whether your furry friend is a dog or a cat, we will cater to each of your pets individually.

We are currently offering a de-shedding program that involves using a Furminator comb which goes in and gets all that fluffy undercoat out. Often this technique may take a couple of times before it starts working but it definitely makes a difference. The Furminator works very well on Labs, German Shepards, Huskies, and all sorts of breeds that have a thick undercoat. Call today and make your dog or cats' salon appointment.
